

DIGITAL MICRO HARDNESS TESTERS

▶ MMT-X Feature

- •The new function deploy, color LCD touch panel.
- •The turret which mounted two indenter, four objective lenses.
- ·Testing area of industry maximum class.
- ·Wide test force range.
- ·Line up in LCD model.
- \cdot 0.01 μ m measuring.(Magnification X200 \sim X1000)
- ·LED light source.

DIGITAL MICRO HARDNESS TESTERS

Operation

Color LCD touch panel

Visibility and operativity improve by color LCD touch panel. Equipped with the assist function that can identify the most suitable measurement condition.

(Correspondence model:X3,X7)

HV testing mode (Vickers Hardness)

HK testing mode (Knoop Hardness)

*Knoop indenter(option) is required.

Light-load brinell mode

Ball indenter(option) is required.

Xbar mode

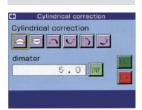

This mode can display the mean and difference immediately.

Fracture toughness KC testing mode.

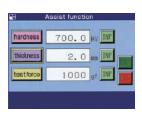

Cylindrical

This mode can set spherical surface and cylindrical correction.

Assist function

This mode can identify the testing condition which is optimum is carried. The testing condition which is optimum can be comfirmed by satisfying 2 from 3 condition of thickness, haedness, test load.

Function

The turret which mounted two indenter, four objective lenses.

Two indenter and four objective lenses are realized following conventional stable loading mechanism. The measuring that reliability is high can be done in various test condition.

(All mode correspondence)

Measuring unit 0.01 μ m was realized by corresponding to high magnification of measuring total magnification 200×-1000×. (Correspondence model: X3.X7)

Operation

Line up in LCD model.

Clear specimen surface image magnified on TFT LCD monitor is displayed. Fatigue by the long operation is decreased. The integrated structure, there is no eye movement.

Because the Measurement knob is placed in the measurement

panel, you can significantly reduce the fatigue of working long

(Correspondence model: X3,X7)

Function

Testing area of industry maximum class.

By a new design,testing range of specimen height 120mm and specimen depth 160mm was secured.

(All mode correspondence)

MMT-X7

Digital model with auto turret.

Digital type

Min.scale: $0.01\mu m(200 \times \sim 1000 \times)$

Min measuring unit : $0.01 \mu m(200X\sim1000X)$

Touch panel type / Turret : Auto
Data output type / Dwell time : 5~99sec

MMT-X3

Digital model with touch panel.

Digital type

 $\textbf{Min.scale}: 0.01\,\mu\text{m}(200\times\!\sim\!1000\times)$

Min measuring unit : 0.01 μ m (200X \sim 1000X)

Touch panel type / Turret : Manual Data output type / Dwell time : $5\sim$ 99sec

MMT-X1

order made

Economy model of manual operation. Analog type

**Number of hardness tester is in a part of \square of a model name. LCD integrated model is only digital model.(X3,X7) *1 X1 do not have a data display function.

Automatic System

Automatic reading system PMT series

PC system of the automatic reading function deployment. In addition to automatic reading, data processing and operation of hardness testers* can be operated in the PC side.

Automatic stage system AMT-Sseries

PC system of the automatic stage deployment. Excellent measurement by the stage control box in the operation can be done.

Automatic stage-reading system

AMT-PS series

PC system of the automatic reading and stage function deployment. Various measuring patterns can be set.

Automatic stage-reading-focus system AMT-FS series

PC system of the reading automatic stage auto focus. Serial operation of position move - Loading - auto focus - auto reading are done in all automatic.

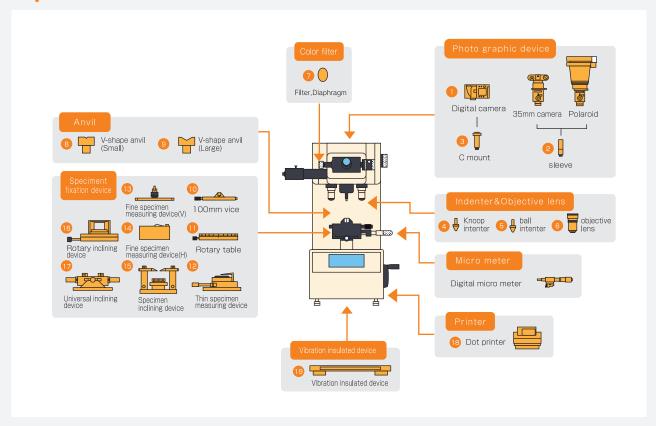

**Hardness tester models that can control is the only digital models.

Data processing software

Hardness Data Communication Software(Option)

HARDCOM SERIES

Testing data are transmitted to Microsoft Excel directly.

Testing data can be managed if software is installed in the personal computer.

(Microsoft Excel is separately necessary.)

Connection method

Hardness meter output(RS232C)-PC input(RS232C or USB) *USB serial converters standard attachment · Corresponds to USB2.0

Data processing function

Testing data, test condition, statistics data and graph drawing are equipped.

Measurement position data can be input.

Testing position data are indicated by connecting a digital micro-meter.

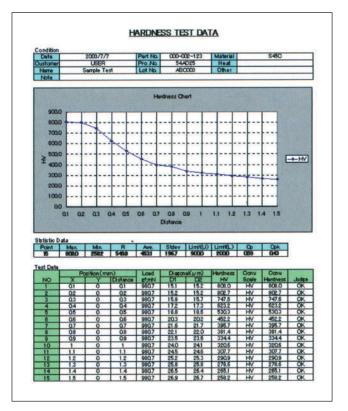

(Digital micro-meter is separately necessary.)

Support an exclusive format.

The input part of the testing condition is freely revokable. Our company will produce it if there is hope by a special form. Code No. S001 Standard Software

Code No. S002 Software with the position data input function. Corresponding model:MMT-X3,X7 · VMT-X3,X7 · RMT-1,3

**RMT series does not have the functionality of a data entry position.
